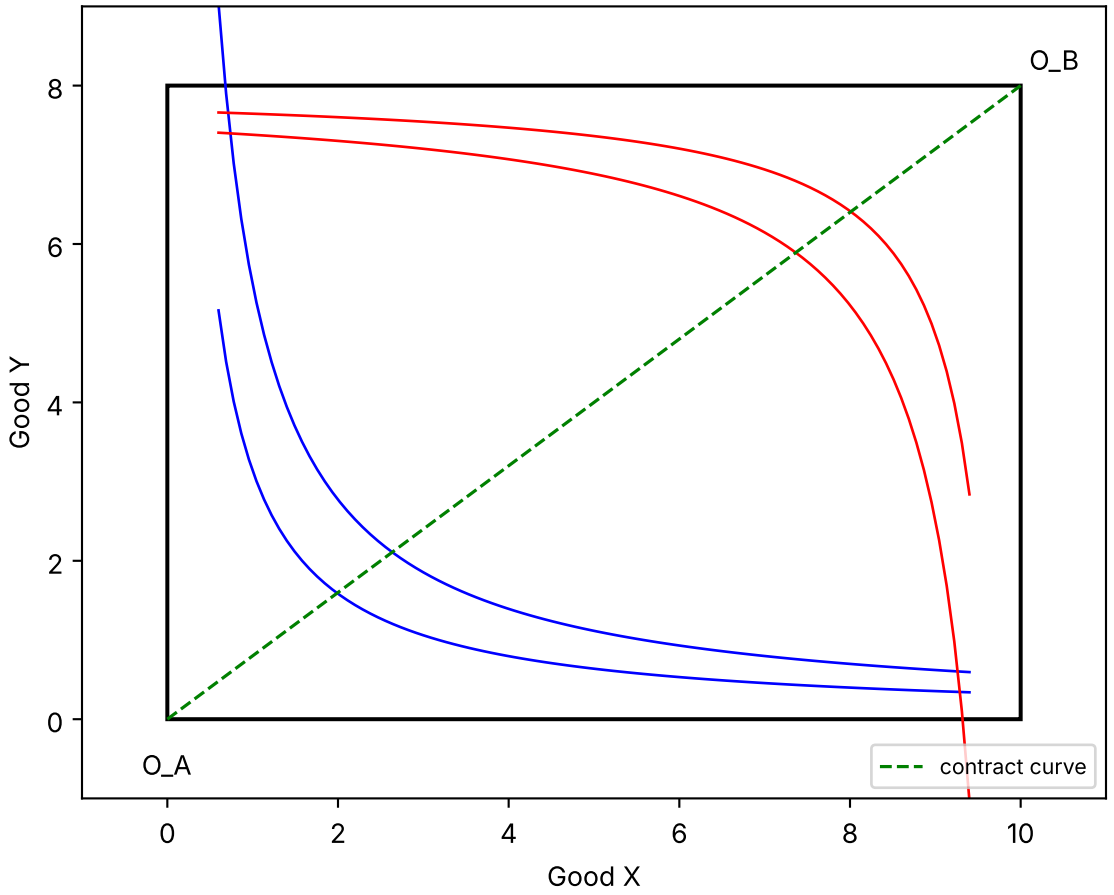
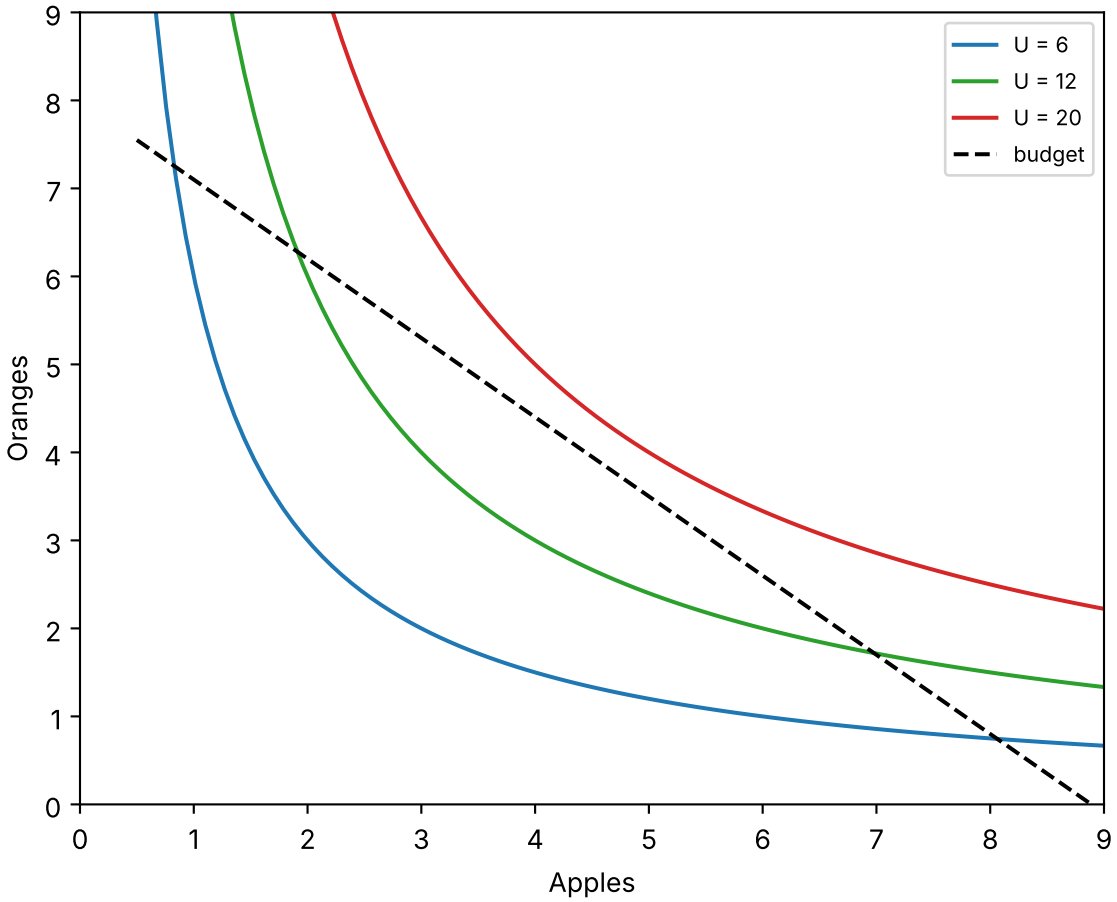
Edgeworth box



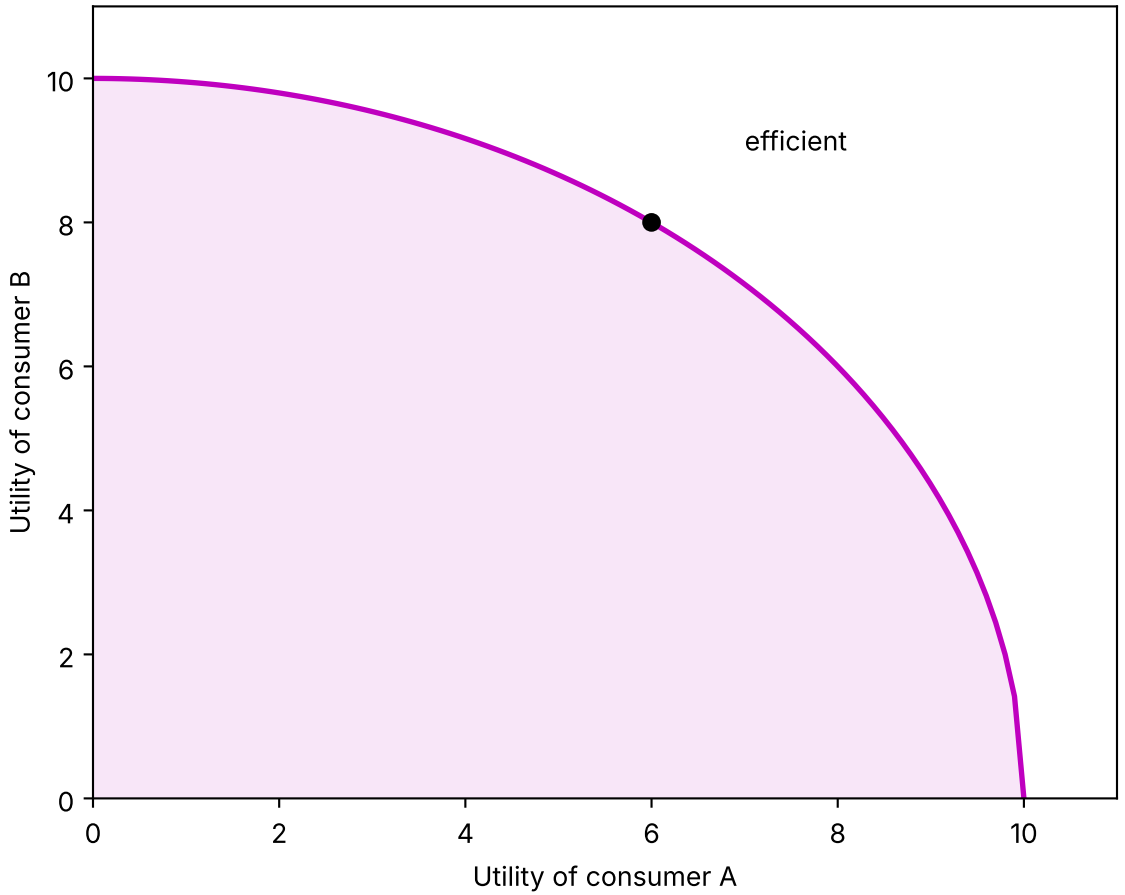
- Two consumers share a fixed endowment
- Each corner is one consumer's origin
- Efficient points lie on the contract curve

Indifference curves



- Higher curves mean more utility
- Curves are convex to the origin
- The optimum is where the budget line is tangent

Utility possibility frontier



- Maps every efficient allocation to utilities
- Points inside the frontier are wasteful
- Points outside are infeasible

Summary

- Efficiency is not fairness
- Trade-offs live on the frontier
